

UML Submission Format

Hardcopy, one per team

Due: 02/13/2026

- Cover page: Include project title, Team #, Semester info; and Team member names (put team names on the bottom of the cover page, one name per line), no page number of the cover page
- Page 1: Table of Contents
- Page 2: An executive summary of your term project. If default, use the text provided in the term project description
- Page 3: Project Context diagram (This is not a UML document). Use any format you like from the google list (i.e. enter “SE context diagram pictures” or use the link below):
https://www.google.com/search?rlz=1C1CHBD_enUS786US786&sxsrf=ALeKk00vvqwU4m3g-KFL30ES_T1U2fPGSg:1613030005804&source=univ&tbm=isch&q=SE+context+diagram+pictures&sa=X&ved=2ahUKEwjY1leEreHuAhUWK80KHS_2Aw8QjJkEegQICRAB&biw=1536&bih=754
- Page 4: A class diagram showing all the classes (i.e. components) in your overall project. Please title it “UML-ClassDiagram-System”
- Page 5 ... Page n: Please draw one UML diagram (try to use mixed types) for each of your components (e.g. “UML-STD-Login&Registration”, “UML-ActivityDiagram-Search”,...). Please place one UML per page (i.e. no two UML diagrams on the same page). Please refer to the samples provided on Canvas. Never use just one UML type for all components, some general guidelines for each UML type to use:
 - Use Class Diagram: If the component is static, without much going back and forth, i.e. you just want to show what is in that component
 - Use State Transition Diagram (STD): If the behavior is dynamic like Login & Registration or Game playing (i.e. many back & forth actions)
 - Use Activity Diagram: if you just need to show the flow of your process
 - Use Sequence Diagram: if the order of events is important (e.g. when registering for a class, order matters, since you must select a class first, then register, then make a payment)
