1. Introduction and Plan of Approach

This test cases document will cover our plan for testing the functionality and effectiveness of running our PickTick mobile marketplace software application. The purpose of this action is to make sure that our core system feature – including user security, ticket browsing, listing, admin control, communication tool, and checkout function – works perfectly when the system is needed and evades as many errors and bugs as possible.

Testing will go through various trials using a structured, module-based approach, with each main feature being tested independently using well-defined test cases. Each test case includes multiple main feature focuses, user actions, and expected system behavior to make sure the system response is perfect and understandable without errors.

The testing process will follow an out-to-in pattern, which tests from when the application opens to the state of payment and additional areas. First, authentication, such as **Registration** and **Login**, will try to ensure user security and valid information for each individual, and make sure no repetition for existing users. Then, the test goes through **Dashboard and Navigation** to confirm the user can access all main features. Following this, the system features for buyers like **Search**, **Filter**, and **Viewing Listing** will be tested so that buyers can access all of their functions. The seller feature, which includes Create **Listing** and **Modify Listing**, will also be tested next. **Admin Management**, which helps admins to manage the app listing and ensure no scam users, will follow the trial. To ensure proper transaction flow, the **Payment** feature will not escape this purge. Last but not least, the **Chatbox** function, an additional feature added to help users communicate with each other and negotiate, will be tested to help ensure messages are sent back and forth smoothly.

Both happy path (successful) and erro path (failure) will be covered to ensure the system works smoothly. The expected results for each test case will be clearly demonstrated and indicate what the system should respond if the event happens, including user features, error messages, and outcome behavior.

2. Test Cases:

2.1. REGISTRATION

Project Name: PickTick
Test Case Name: Registration
Test Case Id: CSE3310/Spring 2026/Team1/Registration

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC11A	User enters new valid username, email, and password that meets security requirements. And then user submits registration form.	New account creates in system, sends system sends a registration/confirmation email to user, and after validation system displays a message confirming that registration was successful.	
TC11B	User enters a new username and email, but the password that user created does not meet security requirements, then user submits the registration form.	System does not create an account and gives an error saying that password does not meet the security requirements.	
TC12	User enters an email address or username that already exists in the system and attempts to register.	System does not create an account and gives an error saying that the username/email is already taken.	
TC13	User leaves one or more required registration fields blank and submits the form.	System does not create and account and gives a validation message that identifies the missing required fields.	
TC14	User selects the cancel/back option from the registration screen before submitting.	The registration process is canceled. System does not create an account, and the user is returned to the previous screen or login screen.	

2.2. LOGIN

Project Name: PickTick
Test Case Name: Login

Test Case Id: CSE3310/Spring 2026/Team1/Login

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC21A	User enters a valid login ID or email and correct password, then presses the login button.	The system authenticates the user successfully and opens the main dashboard/home page.	
TC21B	User enters a valid login ID or email but an incorrect password, then presses Login.	System denies access and gives an error saying that the password is incorrect. The login page remains open.	
TC22	User enters an ID or email that is not registered in the system and attempts to log in.	System denies access and gives an error saying that the account does not exist or the credentials are invalid	
TC23	User leaves the ID/email field or the password field and tries to Login.	System does not login to the user and gives a validation message to fill all required fields.	
TC24	Existing user presses on forgot password button and requests a password reset.	The system sends a password reset email to the user's registered email and displays a confirmation message.	
TC25	User presses Cancel button on the login page.	The login process is canceled and the user is returned to the previous screen without being authenticated.	

2.3. DASHBOARD & NAVIGATION

Project Name: PickTick
Test Case Name: Dashboard Navigation
Test Case Id: CSE3310/Spring 2026/Team1/Dashboard Navigation

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
----------------------	------------------------------	-------------------------	---

TC31A	User logs in successfully and lands on the dashboard/main page.	The dashboard loads successfully and displays the main navigation options without errors.	
TC31B	User scrolls through the dashboard/main page.	The page scrolls normally, all visible content loads correctly, no UI issues.	
TC32	User selects the navigation option for Search/Marketplace from the dashboard.	The system opens the Search/Marketplace page successfully.	
TC33	User selects the navigation option for Create Listing from the dashboard.	The system opens the Create Listing page successfully.	
TC34	User selects the navigation option for Chatbox from the dashboard.	The system opens the Chatbox page successfully and displays available conversations or chat options.	
TC35	Admin user logs in and selects the navigation option for Admin Management.	The system opens the Admin Management page successfully and shows controls that are only accessible by the admin.	
TC36	A user who is not an admin tries to access the admin dashboard.	System blocks access and displays an authorization error.	

2.4. SEARCH

Project Name: PickTick
Test Case Name: Search
Test Case Id: CSE3310/Spring 2026/Team1/Search

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC41	Type in an example search for listing.	Should pull up all active listings with any of the keywords in the Title, description, username.	

2.5. FILTER

Project Name: PickTick
Test Case Name: Filter

Test Case Id: CSE3310/Spring 2026/Team1/Filter

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC51	Activate filter for price within \$150-\$300	Should not show any ticket listings for under \$150 and over \$300	

2.6. VIEW LISTING

Project Name: PickTick
Test Case Name: View Listing
Test Case Id: CSE3310/Spring 2026/Team1/View Listing

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC61	Click on a listing	Should show all the information on the listing, including price, title, description, the option to chat and add to cart.	

2.7. CREATE LISTING

Project Name: PickTick
Test Case Name: Create Listing
Test Case Id: CSE3310/Spring 2026/Team1/Create Listing

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC71A	Seller attempts to create listing with all required fields filled	User is displayed a success message and directed to their listing on their account view listings page	

TC71B	Seller attempts to create listing with NOT all of required fields filled.	User is displayed a error: missing required info popup, and the missing field(s) are highlighted	
TC72	User attempts to cancel listing creation via back button.	User is displayed a “are you sure” decision, if yes, exit listing creation. If no, popup disappears and continues with listing creation.	

2.8. MODIFY LISTING

Project Name: PickTick
Test Case Name: Modify Listing
Test Case Id: CSE3310/Spring 2026/Team1/Modify Listing

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1A	User attempts to modify listing but required info has been removed	User is displayed a error: missing required info popup, and the missing field(s) are highlighted	
	User attempts to modify listing with all fields correctly filled	User is displayed a success message and directed to their listing on their account view listings page	
TC2	User attempts to cancel listing modification via back button	User is displayed a “are you sure” decision, if yes, exit listing modification without saving changes. If no, popup disappears and continues with listing modification	

2.9. ADMIN MANAGEMENT

Project Name: PickTick
Test Case Name: Admin Management
Test Case Id: CSE3310/Spring 2026/Team1/Admin Management

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC91	Admin removes user account	User is sent an email informing them of account removal, and next time they open app redirected to registration/login	
TC92	Admin deletes listing.	User is sent a notification informing them that one of their listings has been deleted, and listing is removed from view listing(s) page.	

2.10. PAYMENT

Project Name: PickTick

Test Case Name: Payment

Test Case Id: CSE3310/Spring 2026/Team1/Payment

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC101 A	User enters the valid card number or payment method details to pay their ticket.	Payment processes successfully and displayed a confirmation message. The user was then sent back to their cart. If nothing is in the cart, then send the user back to the Dashboard instead	
TC101 B	User entered an invalid payment method (expired, incorrect card number, expired day, CVV, etc.)	An error message will be displayed to tell the user to enter payment method information again.	
TC101 C	User enters invalid or missing information on the payment method.	An error message is displayed to acknowledge missing information; the missing field will be inquiry.	
TC102	The user's account doesn't have enough money to make the transactions.	An error message will be displayed, and the system will ask to use another payment method.	

TC103	User checks out everything in their cart in 1 payment.	The total will be displayed, and the system will ask for the payment information for the total amount of money needed.	
-------	--	--	--

2.11. CHATBOX

Project Name: PickTick

Test Case Name: Chatbox

Test Case Id: CSE3310/Spring 2026/Team1/Chatbox

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC111 A	The user sends 1 complete, valid message to another user in the chatbox	A message appears on the screen of both the sender and receiver	
TC111 B	The user sends an empty message (or a message with only Enter or Space).	The message will vanish, and nothing will be added to the chatbox.	
TC112	One user chats with multiple users at the same time.	Each conversation between 2 users will be held in a separate chat box. And all chatboxes can be displayed independently, and can be seen by the user if chosen.	
TC113	Chatbox history conservation checked	All messages sent by both users in a chatbox won't be deleted upon exiting the conversation or the application.	
TC114 A	User attempts to chat with another user from a Listing.	The chatbox will be created, and both users will be connected.	
TC114 B	User attempts to chat with another user using their ID	The chatbox will be created, and both users will be connected. If the ID is unexist, an error message will be displayed.
